The world of electronics is, by definition, a dynamic, ever-evolving, fast-paced universe of leaders and innovators. Since its inception in 1946, Derf Electronics has understood the unique environment of the electronics industry whether by maintaining an extensive inventory of electronic components or providing the kind of engineering support that our clients demand.¹ By embracing the role of leader, Derf has committed itself to delivering tangible expertise to all of our customers.

Our innovative inventory management and information systems assist our customers in controlling materials costs, in reducing cycle times and in keeping pace with rapidly occurring technological developments. With over 250,000 line items stocked in our 110,000 sq. ft. warehouse, Derf prides itself on carrying a complete array of electronic components from capacitors to integrated circuits and semiconductors. Our on line electronics part search is your easy-to-use portal to finding the right part for the right need.

At Derf Electronics, we do not merely provide components, as other vendors do. Rather, we partner with our customers to find the solutions that can benefit them the most.¹ Certainly, our core value is built on competitive pricing, immediate delivery, product focus and exceptional service. But Derf goes beyond this by empowering our clientele to work with us to find the answers to their most pressing business needs. This is why Derf has initiated a program to track the inventories of thousands of distributors, manufacturers and electronic trading companies world-wide. In today's rapidly changing technological landscape nothing less would suffice.
